

**Company Name**

VertexOne Manufacturing Technologies Ltd.

---

**Industry**

Industrial Manufacturing & Smart Factory Solutions

---

**Headquarters**

Pune, Maharashtra, India

---

**Founded**

2013

---

**Employees**

2,350+

---

**Annual Revenue**

USD 185 Million

---

**Website**

[www.vertexonetech.com](http://www.vertexonetech.com)

---

**Primary Contact**

Ms. Ananya Rao

Chief Digital Officer (CDO)

---

**Secondary Decision Makers**

- Chief Information Officer (CIO)
- VP Manufacturing

- Director of Digital Transformation
- Procurement Director
- Head of Enterprise Applications

---

### **Digital Maturity**

Advanced

---

### **Cloud Platform**

Microsoft Azure

---

### **Existing CRM**

Microsoft Dynamics 365

---

### **ERP**

SAP S/4HANA

---

### **Business Objective**

Modernize enterprise decision-making using Agentic AI and intelligent workflow automation.

---

### **Budget**

#### **Total Project Budget**

USD 420,000

---

#### **Pilot Budget**

USD 75,000

---

#### **Enterprise Rollout Budget**

USD 345,000

---

**Expected ROI**

325%

---

**Expected Payback Period**

8 Months

---

**Timeline**

Q4 2026

October

Project Planning

November

Pilot Deployment

December

Enterprise Rollout

January 2027

Performance Optimization

---

**Current Business Challenges**

Use these exactly.

- Manual approval workflows delay critical business decisions.
- Customer information is fragmented across ERP, CRM, and spreadsheets.
- Executive dashboards provide delayed insights.
- Manufacturing reports require extensive manual consolidation.
- Compliance evidence collection consumes significant operational effort.
- Procurement approvals involve multiple disconnected systems.
- Sales forecasting lacks AI-driven prediction capabilities.
- Executive teams struggle to identify high-value opportunities quickly.

---

## **Business Goals**

Use all of these.

- Automate enterprise approval workflows.
- Reduce operational expenditure.
- Improve executive decision speed.
- Enhance cross-department collaboration.
- Enable AI-powered customer qualification.
- Improve enterprise forecasting accuracy.
- Increase manufacturing efficiency.
- Centralize enterprise intelligence.
- Strengthen compliance monitoring.
- Accelerate enterprise digital transformation.

---

## **Buying Signals**

Use these exactly.

- Enterprise AI strategy approved.
- Digital transformation budget allocated.
- Executive workshop completed.
- Technical proof-of-concept requested.
- Manufacturing process assessment completed.
- Procurement negotiations initiated.
- Security architecture review scheduled.
- Legal contract drafting in progress.
- Executive Steering Committee approval received.
- Pilot deployment approved.

---

## **Existing Technology Stack**

Microsoft Azure

Microsoft Dynamics 365

SAP S/4HANA

Power BI

Microsoft Teams

Azure Active Directory

SharePoint

GitHub Enterprise

FastAPI Services

REST APIs

Docker

Kubernetes

---

## **Pain Points**

Current operational issues include:

- Duplicate customer records across departments.
  - Slow executive approvals.
  - High manual effort for compliance reporting.
  - Lack of centralized business intelligence.
  - Poor visibility into manufacturing KPIs.
  - Delayed procurement approvals.
  - Inconsistent customer qualification process.
  - Limited predictive analytics capability.
- 

## **Compliance Requirements**

ISO 27001

SOC 2 Type II

GDPR

NIST Cybersecurity Framework

IEC 62443

Role-Based Access Control

Audit Logging

Encryption at Rest

Encryption in Transit

Data Retention Policy

Zero Trust Security

---

### **Technical Requirements**

Single Sign-On

Multi-Factor Authentication

API Gateway

REST APIs

Event-driven architecture

Knowledge Graph

Enterprise Search

Agent Memory

Shared Context

Vector Database

Role-based Dashboards

Real-time Analytics

---

### **Success Metrics**

Reduce proposal evaluation time by 75%.

Reduce manual approval effort by 60%.

Increase customer qualification accuracy to 95%.

Reduce operational costs by 32%.

Improve executive decision speed by 70%.

Increase forecasting accuracy by 40%.

Reduce compliance reporting effort by 65%.

Achieve enterprise-wide AI adoption across all business units.

---

### **Expected Business Outcomes**

Expected annual savings:

USD 1.8 Million

Expected productivity improvement:

58%

Expected ROI:

325%

Expected payback:

8 months

Projected customer satisfaction improvement:

42%

Executive decision cycle reduction:

70%

Compliance reporting automation:

80%

Manufacturing process optimization:

35%
